## AMENDED VERSION:

--2.(Twice Amended) A toy comprising:

a security alarm [device] system comprising a controller and having an armed state and an unarmed state, the controller being responsive to a signal input to at least one input thereof to cause the security alarm [device] system to selectively assume the armed and unarmed states; a signaling device coupled to the controller and responsive to provide an audio or visual alarm signal; the controller causing the signaling [device] system provide an alarm signal with a change of state of the security alarm [device] system for said toy between the [its] armed state and the [its] unarmed state.--

--24. (Amended) A toy comprising:

a security alarm [device] system comprising a controller activation of an alarm, the security alarm having an armed state and an unarmed state, the controller being responsive to a signal provided to at least one input of the controller to cause the security alarm [device] system for said toy to selectively assume the armed and unarmed states; a signaling device coupled to the controller and responsive to provide at least one first audio or visual alarm signal representing a change in state of the security alarm [device] system and at least one second audio or visual alarm signal representing activation of the alarm; the controller causing the signal device to provide the at one least first audio or visual signal with a change in the state of the security alarm [device] system between the armed state and the unarmed state and to provide the at least one second audio or visual alarm signal when the alarm is activated.--

--30.(Amended) A toy comprising:

a security alarm [device] system comprising a controller and having an armed and unarmed state, the controller being responsive to at least one input thereof to cause the security alarm [device] system for said toy to selectively assume the armed and unarmed [device] states; a signaling device coupled to the controller and responsive thereto to provide an alarm signal with a change of state of the security alarm system [device] between the armed state and the unarmed state; a propulsion system including an electronic motor which propels the toy and a motor drive which selectively supplies power to the electronic motor; the controller being coupled to the motor drive and causing the motor drive to selectively supply or not supply power to the electric motor when the security alarm [device] system is in the armed state.---
